

**The U.S. Department of State's priority is the safety and security of U.S. citizens overseas. The Department is obligated to provide information to U.S. citizens traveling or residing abroad through Travel Advisories. These advisories are aimed to help people assess the risks of international travel and understand what steps to take to ensure their safety overseas.**

---

**The State Department's update on January 23, 2024 was a routine release. The release provided an analytical update on medical services. It was not timed with any other issue.**

**The level of our travel advisory did not change with this update and has remained at level 3, the same level it has been since March 2022.**

---

**The update incorporated analysis of accidents, illnesses, and deaths of U.S. citizens based on a review of health services and the medical care received when U.S. citizens are hospitalized.**

**Jamaica is and will continue to be a major tourist destination for U.S. citizens. We will continue to work with the Jamaican Government and our local partners to serve the interests of U.S. citizens and promote the well-being of Jamaicans.**
